A weld is made when separate pieces of material to be joined combine and form one piece when heated to a temperature high enough to cause softening or
Fri, 07 Dec 2018 14:41:00 GMT Welding Intro to Welding - UFL MAE - Friction stir welding (FSW) is a solid-state joining process that uses a non-consumable tool to join two facing workpieces without melting the workpiece material. Heat is generated by friction between the rotating tool and the workpiece material, which leads to a softened region near the FSW tool.
Wed, 05 Dec 2018 21:39:00 GMT Friction stir welding - Wikipedia - Ultrasonic welding is an industrial technique whereby high-frequency ultrasonic acoustic vibrations are locally applied to workpieces being held together under pressure to create a solid-state weld. It is commonly used for plastics, and especially for joining dissimilar materials. In ultrasonic welding, there are no connective bolts, nails, soldering materials, or adhesives necessary to bind the ...
